FUSION
Processing Intelligence

Designed from the ground up, FUSION pulls together Triton modules into one user friendly platform where everything can be accessed and viewed in one central location.

Primary Processing

Inventory & Dispatch

Secondary Processing

Multi Module, Multi Site Connection

FUSION seamlessly links Triton software modules together into one platform opening a world of possibilities to control, report and view food your processing operations in real time. Whether connecting two modules together, or many modules from multiple sites, FUSION is the solution to centrally combine software modules together and unlock the potential of your food processing operation.

FUSION View – Real Time Business Intelligence

Harness the potential of your operation with FUSION View. Create real time graphical views of your operation from a single module or combine information from multiple modules and sites with practically unlimited combination options. Create views the way you want with a range of real time graphs, dials, running totals and many more graphical display options. Access in real time on the go with your smart phone or tablet, at the office on your PC, and on the plant floor on large displays.

FUSION Intelligence – Reporting

Be informed with FUSION Intelligence, an advanced integrated reporting module with a range of standard reports and a custom report creator, enabling customers to make their own custom reports the way they want. FUSION makes it possible to combine data from multiple modules and sites enabling customers to always be informed of critical metrics specific to their operation.

Central Control Functions

FUSION provides a range of central control functions for certain modules and tasks. These include kill agenda, centralised specifications and more. The list is growing each day as new functionality is continually added to the solution.
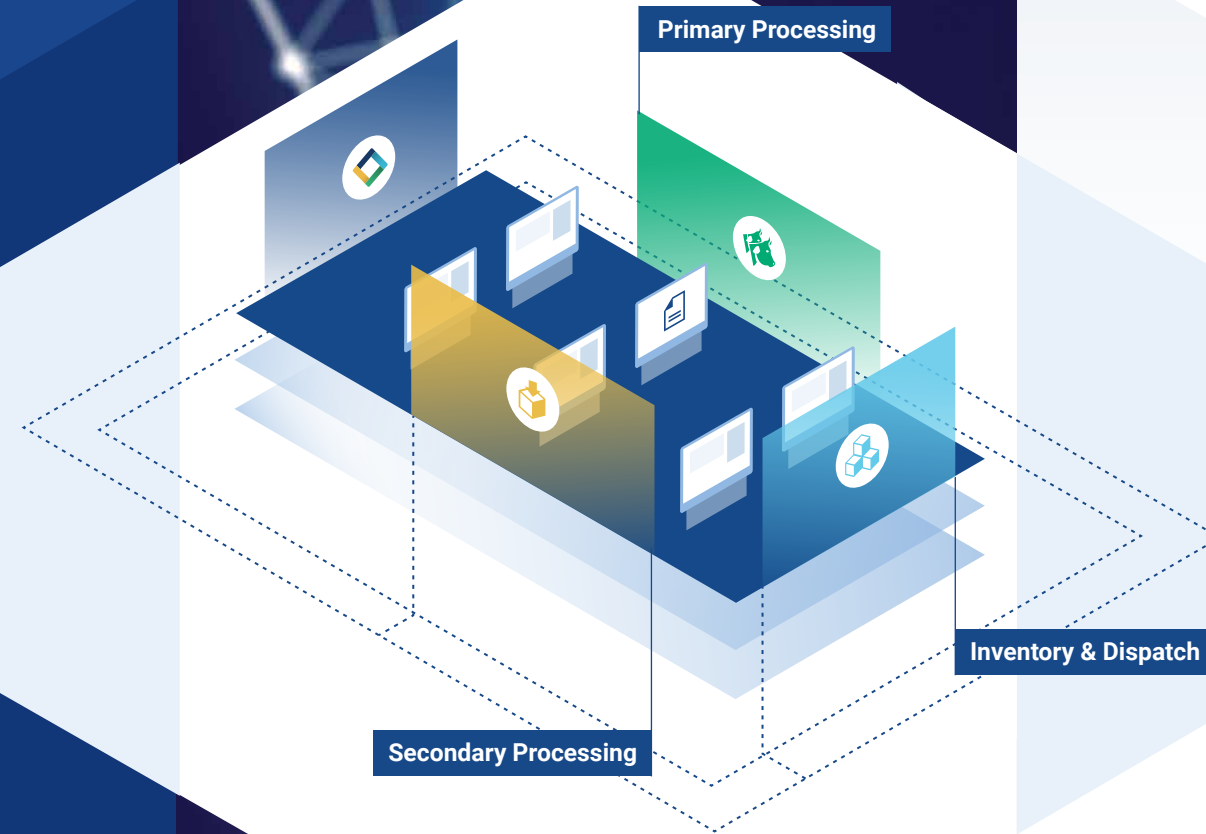

Access from Anywhere

Access FUSION from practically any location with smart phones, tablets, PCs, or any device with a browser, including large screen displays on production floors or anywhere within your operation. Whether you are on the go or at your desk you can access anything you need with the device of your choice.

Traceability

FUSION provides unparalleled traceability for your operation by linking data from animal to carcass (and inventory) to carton to order, making it easy to know what was produced from where, and its current location

Third Party Integrations

FUSION has a well documented API providing easy connection to other systems including ERP, accounting, quality management systems and more.
Scalability

Whether you want to add Triton processing modules as your operations expands, or adding an entire new site, FUSION is simple and easy to scale with modules and sites seamlessly and easily added. Scaling your operational software with FUSION has never been easier.

FUSION
Processing Intelligence

FUSION is Triton's central business intelligence and control platform that has been designed from the ground up to fuse Triton's processing modules and data together.

FUSION Connects:

- **Primary Processing**
- **Secondary Processing**
- **Sales & Inventory**

FUSION is Triton's central management platform that has been designed from the ground up to fuse processing software modules and data together. Food Processors face challenges from a variety of sources such as the need to combine data from multiple parts of operations, requirements for end to end traceability, multiple site integration, offsite storage, big data analysis and much more. FUSION was borne to solve these needs and more. FUSION provides a single point of access and control to software systems and brings together multiple software modules from a single site, to multiple sites, into one easy accessible platform.

FUSION supports many centralised, distributed control functions (e.g. specifications, orders, group inventory and production, and more) in a modern, accessible platform that communicates to distributed plant production systems. FUSION also provides carton accurate traceability and smart logic actions for contamination or defect issues during the production process. Utilising the latest web technology (HTML5), FUSION is accessible enterprise wide from production plants, other company offices, or offsite; and from workstations, tablets or smartphones.

FUSION makes data more accessible and presented smarter in customised, graphical forms that provide advanced, real time business intelligence. Our clients and their managers need real-time information at their finger-tips, on their smartphones, or on the plant floor, to remain in touch with what's going on in their business. They also require a flexible platform that allows customisable and unique presentation of data, specific to their needs. These are all FUSION's greatest strengths.

With simple, accessible licensing options, FUSION is readily accessible for single site operators, through to large multi site enterprise customers.
